Sequence 16093, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
APPLICANT: Kealth Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND ANINO ACID SEQUENCES RELATING TO C
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT PILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 16093

LENGTH: 460

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PRIOR APPLICATION NUMBER: 60/217,883

US-09-248-796A-16093
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S-09-22-2-18594, Application.
Sequence 18594, Application.

Patent No. 6551795

Patent Information:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: MICLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-252-991A-18594
                                                                                                                                                   JS-09-252-991A-17622
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-252-991A-18594

G protein-coupled receptor DEZ - mouse
C;Species: Mus musculus (house mouse)
C;Date: 07-ul-1997 #sequence_revision 29-Aug-1997 #text_change 09-Jul-200
C;Accession: JC5498
R;Methner; A.; Hermey, G.; Schinke, B.; Hermans-Borgmeyer, I.
Biochem. Biophys. Res. Commun. 233, 336-342, 1997
A;Title: A novel G protein-coupled receptor with homology to neuropeptide.
A;Reference number: JC5498; MUID:97289630; PMID:9144535
A;Contents: Brain
A;Accession: JC5498; MUID:97289630; PMID:9144535
A;Gross-references: UNIPROT:P97468; UNIPARC:UDI00000269A9; GB:U79525; NID:C;Comment: This protein is involved in the bone metabolism.
C;Superfamily: vertebrate rhodopsin
F;110-187/Disulfide bonds: #status predicted
anaphylatoxin C3a receptor - rat C3a pecies: Rattus norvegicus (Norway rat) C;Species: Rattus norvegicus (Norway rat) C;Date: 05-Mar-1998 #sequence_revision 13-Mar-1998 #text_change 09-Jul-2004 C;Accession: JC5835 R;Fukuoka, Y.; Ember, J.A.; Hugli, T.E. TISSUE SPECIFICITY: Expressed abundantly in the lung and
neutrophils. Also found in the spleen and testis.
SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                   counteracting the actions of proinflammatory signals (leukotriene {\sf B4}).
                                                                                                                                                                                                                                                                                                                                               Swiss-Prot entry is copyright.                                                                                                                                                                                                                                                                                                                                                 WINCTION: Low affinity receptor to N-formyl-methionyl peptides, which are powerful neutrophils chemotactic factors. Binding of PMLP to the receptor causes activation of neutrophils. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. SUBCELLULAR LOCATION: Integral membrane protein.
SUBCELLULAR LOCATION: The grant membrane protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: Low affinity receptor to N-formyl-methionyl peptides, which are powerful neutrophils chemotactic factors. Binding of FMLP to the receptor causes activation of neutrophils. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. SUBCELLULAR IOCATION: Integral membrane protein.
SIMILARITY: Belongs to the G-protein coupled receptor 1 family.

                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Low affinity receptor to N-formyl-methionyl peptides, which are powerful neutrophils chemotactic factors. Binding of PMLP to the receptor causes activation of neutrophils. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         304

"Aspirin-triggered 15-epi-lipoxin A4 (LXA4) and LXA4 stable analogues are potent inhibitors of acute inflammation: evidence for anti-inflammatory receptors.";

J. Exp. Med. 185:1693-1704(1997).

-I-FUNCTION: Low affinity receptor to N-formyl-methionyl peptides, which are powerful neutrophils chemotactic factors. Binding of FMLP to the receptor causes activation of neutrophils. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. The activation of LXA4R could result in an anti-inflammatory outcome counteracting the actions of proinflammatory signals such as LTB4
                                                                                                                                                                                                                             TOPO DOM

I SUBCELULAR LOCATION: Integral membrane protein.

I SUBCELULAR LOCATION: Integral membrane protein.

I TISSUE SPECIFICITY: Expressed mostly in neutrophils, followed by spleen and lung. Expressed at very low levels in heart and lively spleen and lung. Expressed at very low levels in heart and lively spleen and lung. Expressed at very low levels in heart and lively.

SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBL; U78299; AAC53198.1; -; mRNA.

prince in the seceptor to N-formyl-methionyl peptides, which are powerful neutrophils chemotactic factors. Binding of PMLP to the receptor causes activation of neutrophils. This response is mediated via a G-protein that activates a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   phosphatidylinositol-calcium second messenger system.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               96
